PROFESSIONAL SUMMARY

Software Engineer with a strong foundation in programming, problem-solving, and web development, including frontend and API-driven backend systems. Skilled in performance optimization using data-driven techniques. Seeking a software engineering role that values mentorship, clean code practices, and continuous learning.

PROJECTS

IoT Patient Monitoring System

Tech Stack: JavaScript (React.js), HTML5, CSS3, Django, REST API, IoT Sensors

- Developed an IoT-based patient monitoring system for real-time health tracking
- Integrated sensors (temperature, SpO₂, BPM) to collect and transmit patient data to a server
- Worked on frontend development using React.js with reusable components
- REST APIs to display real-time patient data dynamically
- Implemented CSV export functionality for downloading patient health records
- Integrated video calling feature for remote doctor-patient consultation

Ecommerce Project

Tech Stack: JavaScript (React.js), HTML5, CSS3, Django, REST API

- Developed backend services using Django following modular structure (handlers, routing, utilities)
- Designed and implemented RESTful APIs for product, user, and order management
- Developed responsive frontend using React.js with reusable components
- Integrated frontend with backend APIs for dynamic data rendering
- Structured project with clean architecture (cmd, handlers, router, services)

FocusTone – Mood-Based Web Color Filter (Chrome Extension)

Tech Stack: JavaScript (Vanilla JS), Chrome Extension API, HTML5, CSS3

- Tracked user behavior (typing speed, mouse movement, scrolling) in real-time
- Implemented content scripts to capture and process user interactions
- Applied visual filters to web pages based on detected user activity
- Enhanced user focus and browsing experience through adaptive UI changes

Word Counter Web App

Tech Stack: Django, Python, HTML, CSS

- Word count calculation from user input text
- Backend logic implemented with Django views
- Clean and responsive UI using HTML & CSS

TECHNICAL SKILLS

Programming Languages: C | C++ | Go | Python
Web Technologies: HTML5 | CSS3 | JavaScript | Django
Backend & Tools: REST API concepts | Git & GitHub
Problem Solving: Competitive programming | DSA & Algorithms

INTERPERSONAL SKILLS

Leadership | Communication | Teamwork | Empathy | Negotiation | Adaptability | Active Listening | Work Ethic | Emotional Intelligence

EDUCATION

B.Sc. in Computer Science and Engineering (2024) – Southern University Bangladesh
HSC (Science), 2019 – Bangladesh Nou Bahini School & College
SSC (Science), 2017 – CMP School & College

TRAINING & COURSES

Search Engine Optimization (SEO) – UY LAB (Sep 2024)
Software Engineering Program – Phitron (Dec 2024)
Programming with Python – Udemy (Feb 2025)

LANGUAGE PROFICIENCY

Bengali – Native | English – Professional Working Proficiency
